

04.2 Medication

Where possible key persons are responsible for administering medication to their key children; ensuring consent forms are completed, medicines stored correctly, and records kept.

Administering medicines during the child's session will only be done if absolutely necessary.

If a child has not been given a prescription medicine before, it is advised that parents keep them at home for 48 hours to ensure no adverse effect, and to give it time to take effect. The setting managers must check the insurance policy document to be clear about what conditions must be reported to the insurance provider.

Consent for Administering Medication

- Only a person with parental responsibility (PR), or a foster carer may give consent. A childminder, grandparent, parent's partner who does not have PR, cannot give consent.
- When bringing in medicine, the parent informs their key person/back up key person, or room senior if the key person is not available. The setting manager should also be informed.
- Staff who receive the medication, check it is in date and prescribed specifically for the current condition. It must be in the original container (not decanted into a separate bottle). It must be labelled with the child's name and original pharmacist's label.
- Medication dispensed by a hospital pharmacy will not have the child's details on the label but should have a dispensing label. Staff must check with parents and record the circumstance of the events and hospital instructions as relayed to them by the parents.
- In certain circumstances non prescribed medication can be administered but this must be discussed with the setting manager beforehand.
- Members of staff who receive the medication ask the parent to acknowledge the online consent form (on Family) stating the following information. No medication is given without these details:
 - full name of child and date of birth
 - name of medication and strength
 - dosage and time to be given.
 - how the medication should be stored and expiry date
 - a note of any possible side effects that may be expected.

Storage of Medicines

All medicines are stored safely. Refrigerated medication is stored separately or clearly labelled in the kitchen fridge.

- The key person is responsible for ensuring medicine is handed back at the end of the day to the parent.
- For some conditions, medication for an individual child may be kept at the setting. 04.2a Healthcare plan form must be completed. Key persons check that it is in date and return any out-of-date medication to the parent.
- Parents do not access where medication is stored, to reduce the possibility of a mix-up with medication for another child, or staff not knowing there has been a change.

Record of Administering Medicines

A record of medicines administered is kept on our online management app 'Family'.

The following details are recorded under the 'medicine' heading of an individual child's learning journey:

- name of child
- name and strength of medication
- the date and time of dose
- dose given and method
- acknowledged by key person/setting manager
- witnessed by a named practitioner
- verified by parent acknowledgement online

- No child may self-administer. If children are capable of understanding when they need medication, e.g., for asthma, they are encouraged to tell their key person what they need. This does not replace staff vigilance in knowing and responding.
- The medication records are monitored to look at the frequency of medication being given. For example, a high incidence of antibiotics being prescribed for several children at similar times may indicate a need for better infection control.

Children with Long Term Medical Conditions Requiring Ongoing Medication

- Risk assessment is carried out for children that require ongoing medication. This is the responsibility of the setting manager and key person. Other medical or social care personnel may be involved in the risk assessment.
- Parents contribute to risk assessment. They are shown around the setting, understand routines and activities and discuss any risk factor for their child.

- For some medical conditions, key staff will require basic training to understand it and know how medication is administered. Training needs is part of the risk assessment.
- Risk assessment includes any activity that may give cause for concern regarding an individual child's health needs.
- Risk assessment also includes arrangements for medicines on outings; advice from the child's GP's is sought, if necessary, where there are concerns.
- 04.2a Health care plan form is completed fully with the parent; outlining the key person's role and what information is shared with other staff who care for the child.
- The plan is reviewed every six months (more if needed). This includes reviewing the medication, for example, changes to the medication or the dosage, any side effects noted etc.

Life-saving Medication and Invasive Treatments

Life-saving medication and invasive treatments may include adrenaline injections (EpiPens) for anaphylactic shock reactions (caused by allergies to nuts, eggs etc) or invasive treatment such as rectal administration of Diazepam (for epilepsy).

- The key person responsible for the intimate care of children who require life-saving medication or invasive treatment will undertake their duties in a professional manner having due regard to the procedures listed above.
- The child's welfare is paramount, and their experience of intimate and personal care should be positive. Every child is treated as an individual and care is given gently and sensitively; no child should be attended to in a way that causes distress or pain.
- The key person works in close partnership with parents/carers and other professionals to share information and provide continuity of care.
- Key persons have appropriate training for administration of treatment and are aware of infection control best practice, for example, using personal protective equipment (PPE).
- Key persons speak directly to the child, explaining what they are doing as appropriate to the child's age and level of comprehension.
- Children's right to privacy and modesty is respected. Another practitioner is usually present during the process.

Record Keeping

For a child who requires invasive treatment the following must be in place from the outset:

- a letter from the child's GP/consultant stating the child's condition and what medication if any is to be administered
- written consent from parents allowing members of staff to administer medication
- proof of training in the administration of such medication by the child's GP, a district nurse, children's nurse specialist or a community paediatric nurse

- Children with complex and/or long-term health conditions have a health care plan in place which considers the principles and best practice guidance given here.
- Copies of all letters relating to these children must be sent to the insurance provider for appraisal. Confirmation will then be issued in writing confirming that the insurance has been extended. A record is made in the medication record book of the intimate/invasive treatment each time it is given.

Physiotherapy

- Children who require physiotherapy whilst attending the setting should have this carried out by a trained physiotherapist.
- If it is agreed in the health care plan that the key person should undertake part of the physiotherapy regime, then the required technique must be demonstrated by the physiotherapist personally; written guidance must also be given and reviewed regularly. The physiotherapist should observe the practitioner applying the technique in the first instance.

Treatments such as inhalers or Epi-pens must be immediately accessible in an emergency.

Managing Medicines on Trips and Outings

- Children are accompanied by their key person, or other staff member who is fully informed about their needs and medication.
- Fully labelled medication is taken in the pre-school backpack along with the consent/record form.
- If a child on medication must be taken to hospital, the child's medication is taken with them.

Staff Taking Medication

Staff taking medication must inform their manager. The medication must be stored securely in staff lockers or a secure area away from the children. The manager must be made aware of any contra-indications for the medicine so that they can risk assess and take appropriate action as required.

*This policy was adopted at a meeting of **HOUGHTON & WYTON PRE-SCHOOL PLAYGROUP***

To be reviewed as required.
